

# Sprint 1 AI Usage Log

Aymane Mekkaoui | 40287951 | CareerConnect

Tool: OpenAI Codex | September 24 - October 1, 2026

## 1. README

**Purpose and assistance:** AI drafted and shortened the README, then added team names and student IDs.

**Validation and decision:** Compared with the project brief and roster; revised following my feedback and pushed to GitHub.

**Prompt:** write the README file, and push it to the repo

**Response excerpt:** Updated and pushed the README to main.

## 2. Sprint review

**Purpose and assistance:** AI compared the Sprint 1 requirements with GitHub and identified missing work and inconsistencies.

**Validation and decision:** Checked against the brief, files and issues. Used to plan follow-up database work.

**Prompt:** what do i need for sprint 1, check the github as well for coherence

**Response excerpt:** The biggest gaps are planning, assignments, AI evidence, and an integrated two-feature demo.

## 3. Database and documentation

**Purpose and assistance:** AI implemented PostgreSQL tables and migrations, connected registration and profile APIs, added tests and setup instructions, and prepared this log.

**Validation and decision:** Local tests and PostgreSQL CI passed. Submitted in PR #78 for teammate review; personal review is pending.

**Prompt:** ok, do it

**Context:** Approval to complete the database work and prepare an accurate AI log.

**Response excerpt:** I'll check the latest repository state and your assigned scope, complete the database work, and prepare a concise AI log that accurately records the assistance.

## Personal reflection

To be completed by Aymane after reviewing the code and practising the database demo.

Implementation and checks: [GitHub PR #78](#). Prompt/response excerpts above identify the main activities; keep the full conversation as supporting evidence.
